## MyHealtheVet www.myhealth.va.gov

My HealtheVet is a web-based application that creates a new, online environment where Veterans, family, and clinicians may come together to optimize Veterans' health care. Web technology will combine essential health record information enhanced by online health resources to enable and encourage patient/clinician collaboration.

The implications of My HealtheVet are far-reaching. Clinicians will be able to communicate and collaborate with Veterans much more easily. The new online environment will map closely to existing clinical business practices, while extending the way care is delivered and managed. As Veterans build up their lifelong personal health records, they will be able to choose to share all or part of the information in their account with all their health care providers, inside and outside the VA. This has the potential to dramatically improve the quality of care available to our nation's Veterans.

### Secure Messaging

Secure Messaging (SM) is web-based, encrypted communication between patients and health professionals. For patients, SM through My HealtheVet offers convenient access to healthcare team members for non-urgent issues. For clinical staff, SM provides a personal and efficient way to communicate virtually with patients. Healthcare team members find that online communication tends to be faster than telephone calls and also helps coordinate care. SM can substitute for other types of communication and encounters and may improve the quality of in-person visits.
